

EMPOWERING INDUSTRIAL GROWTH WITH RELIABLE SOLUTIONS

About Us

Driving Innovation and Reliability in Industrial Solutions

At Reed Engineering, we specialize in delivering comprehensive supply solutions and advanced engineering expertise, empowering Tanzania's Mining, Oil & Gas, and Industrial sectors with unmatched quality and reliability. Our commitment goes beyond providing products; we build long-term partnerships grounded in trust, sustainability, and a thorough understanding of each client's unique operational needs.

With a focus on efficiency and precision, we work to ensure your operations run smoothly, optimizing productivity and creating enduring success in every project we undertake. Partner with Reed Engineering to experience the difference that expert support and dependable service can bring to your business.

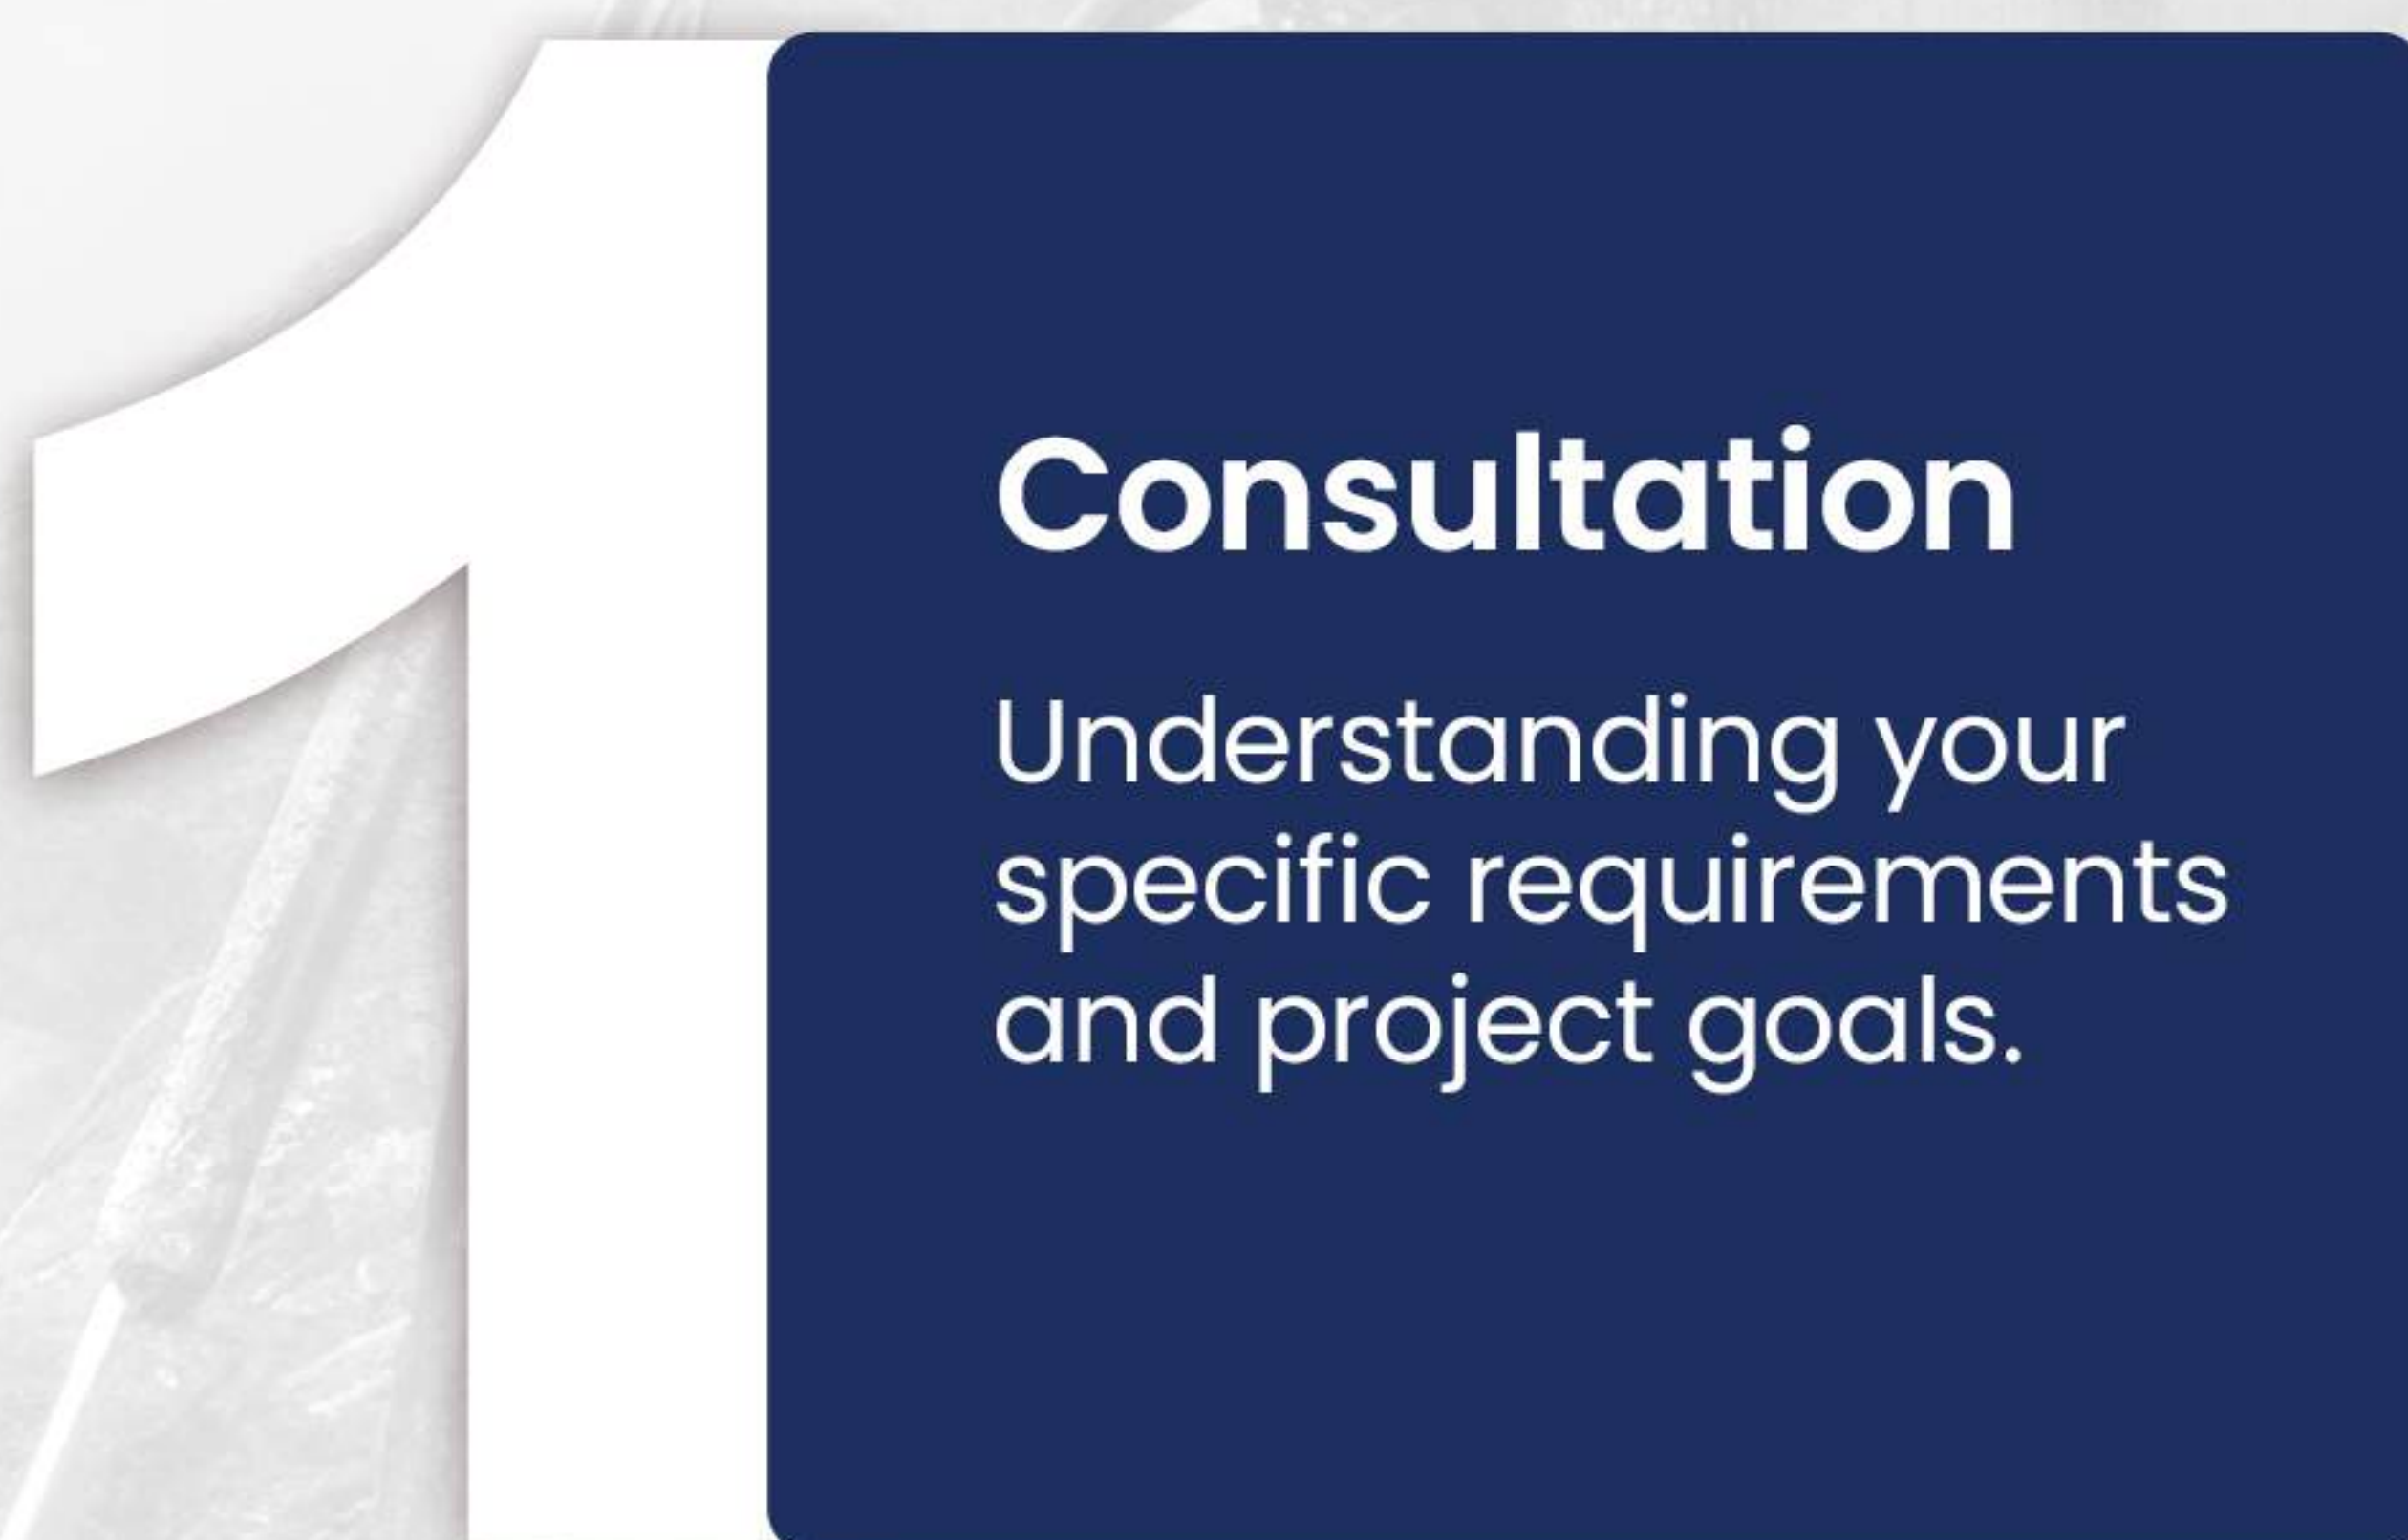

REED ENGINEERING AND INDUSTRIAL SERVICES LIMITED

How We Work

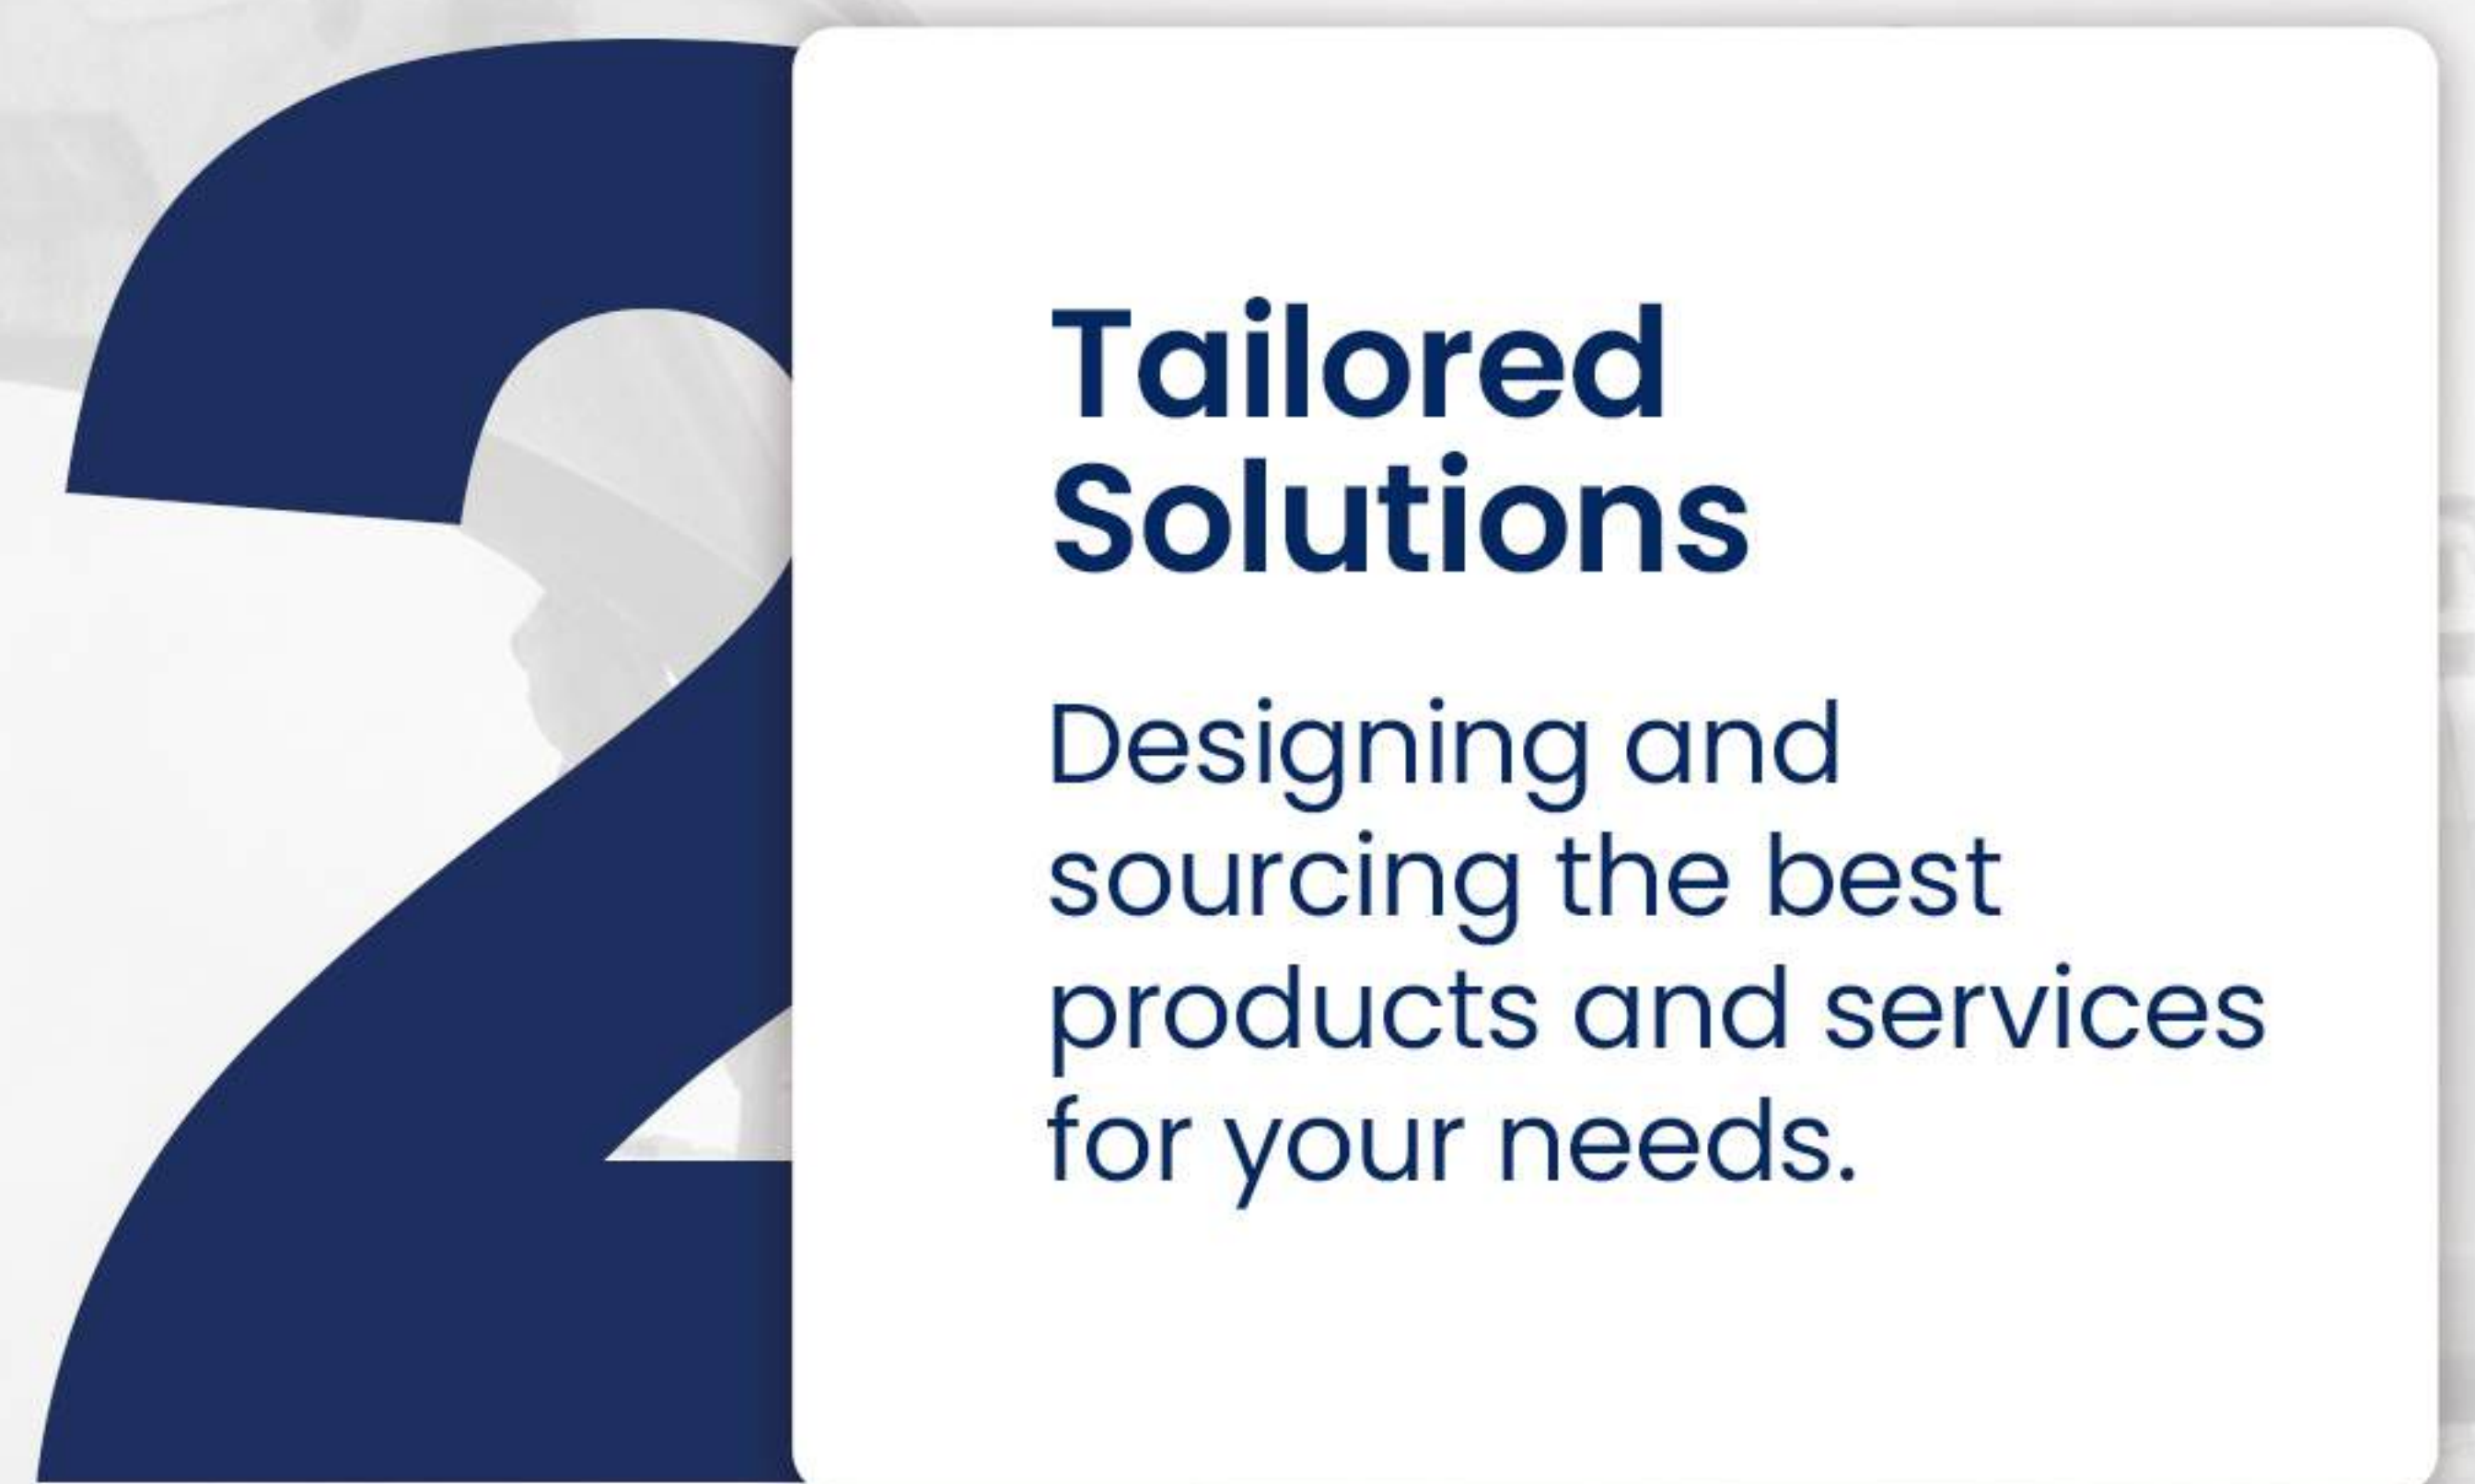

Our Working Process

At Reed Engineering, we ensure a seamless experience from consultation to project completion. Our 4-step process is designed to deliver high-quality solutions tailored to your unique needs, ensuring efficiency, reliability, and long-term success.

1 Consultation

Understanding your specific requirements and project goals.

2 Tailored Solutions

Designing and sourcing the best products and services for your needs.

3 On-site Implementation

Expert installation and execution by our skilled technicians.

4 Ongoing Support

Providing continuous maintenance and support for uninterrupted operations.

Our Services

Expert Services Tailored to Power Your Operations

At Reed Engineering, we provide trusted partnerships and expertise that drive long-term success, with precision and value in every solution to fuel your growth and efficiency.

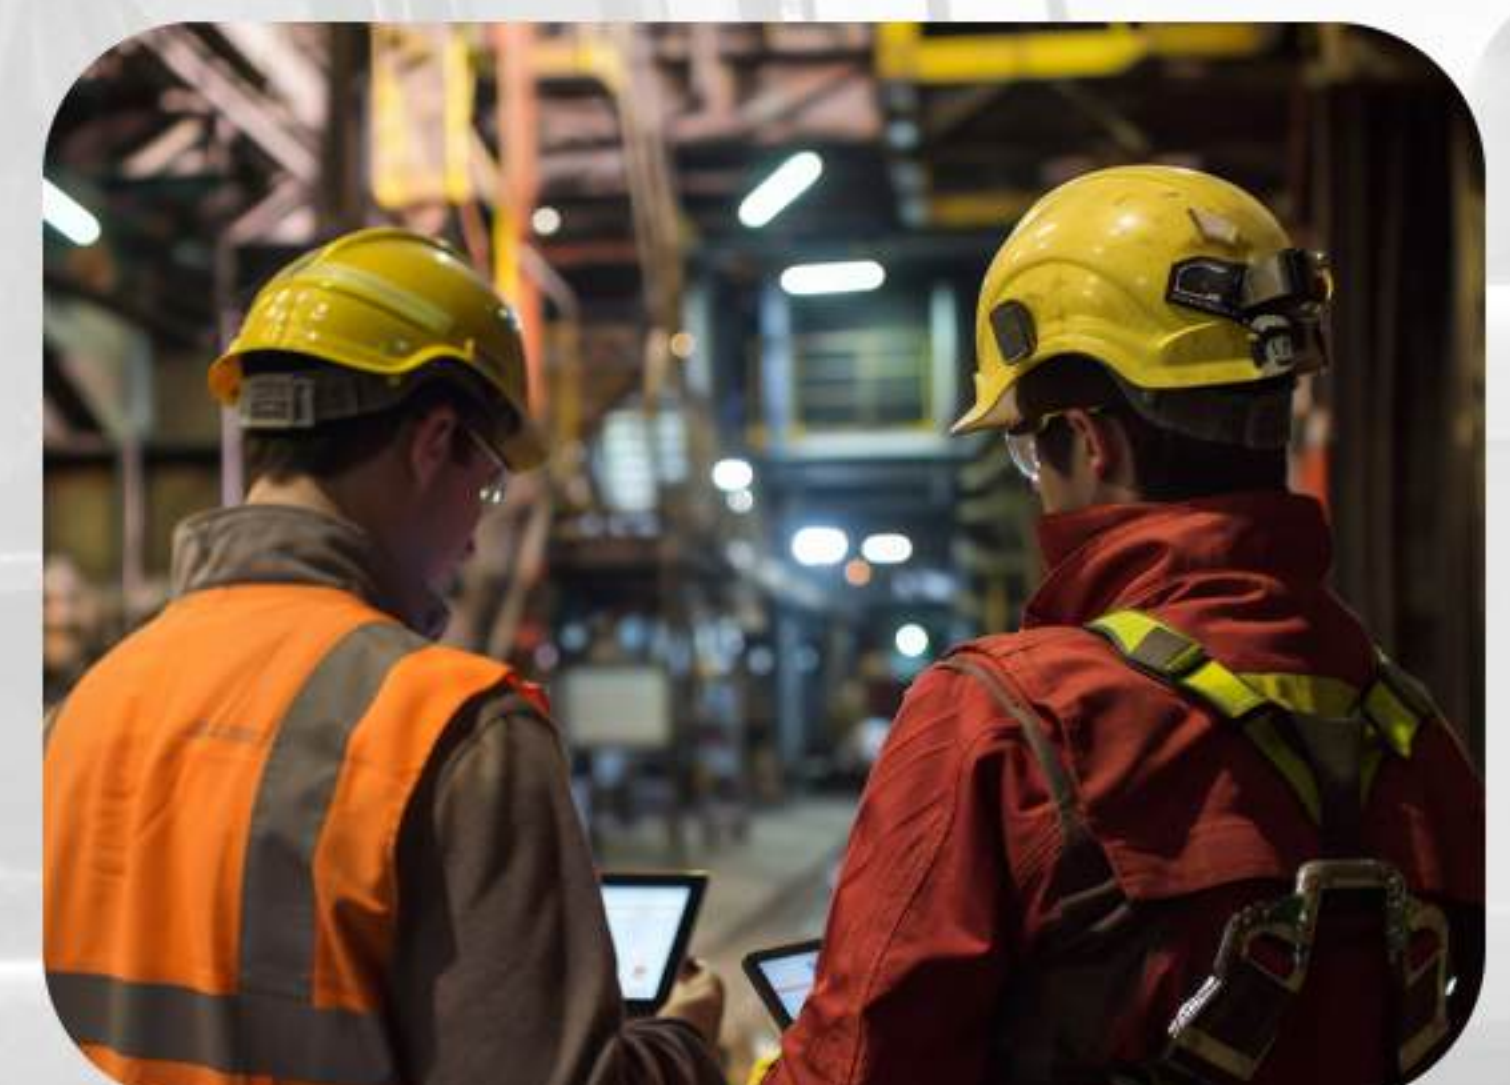

Supply of Mining Equipment and Consumables

We supply high-quality mining equipment and consumables from leading OEM partners, ensuring reliable performance and durability for your operations. Our products are sourced from trusted manufacturers to meet the toughest industry standards and optimize productivity

Service & Maintenance Contracts

Our comprehensive service and maintenance contracts are designed to keep your operations running smoothly. We offer tailored solutions that include regular on-site inspections, preventative maintenance, and timely repairs to minimize downtime and enhance efficiency.

Technician Training & Support

Our comprehensive service and maintenance contracts are designed to keep your operations running smoothly. We offer tailored solutions that include regular on-site inspections, preventative maintenance, and timely repairs to minimize downtime and enhance efficiency.

Steel Supply & Structural Fabrication

We provide high-quality steel supply and custom structural fabrication to meet the specific needs of your projects. Our skilled team ensures precision and durability in every piece, supporting your construction and industrial requirements.

Our Service Offerings

Tailored Solutions for Your Operations

Premium Products for Industrial Excellence

At Reed Engineering, we offer high-quality products tailored for the Mining, Oil and Gas, and Industrial sectors. Our extensive range ensures you have the tools needed to enhance efficiency and achieve your operational goals.

Our OEM Brand Partnerships

1. Rema Tip Top Africa

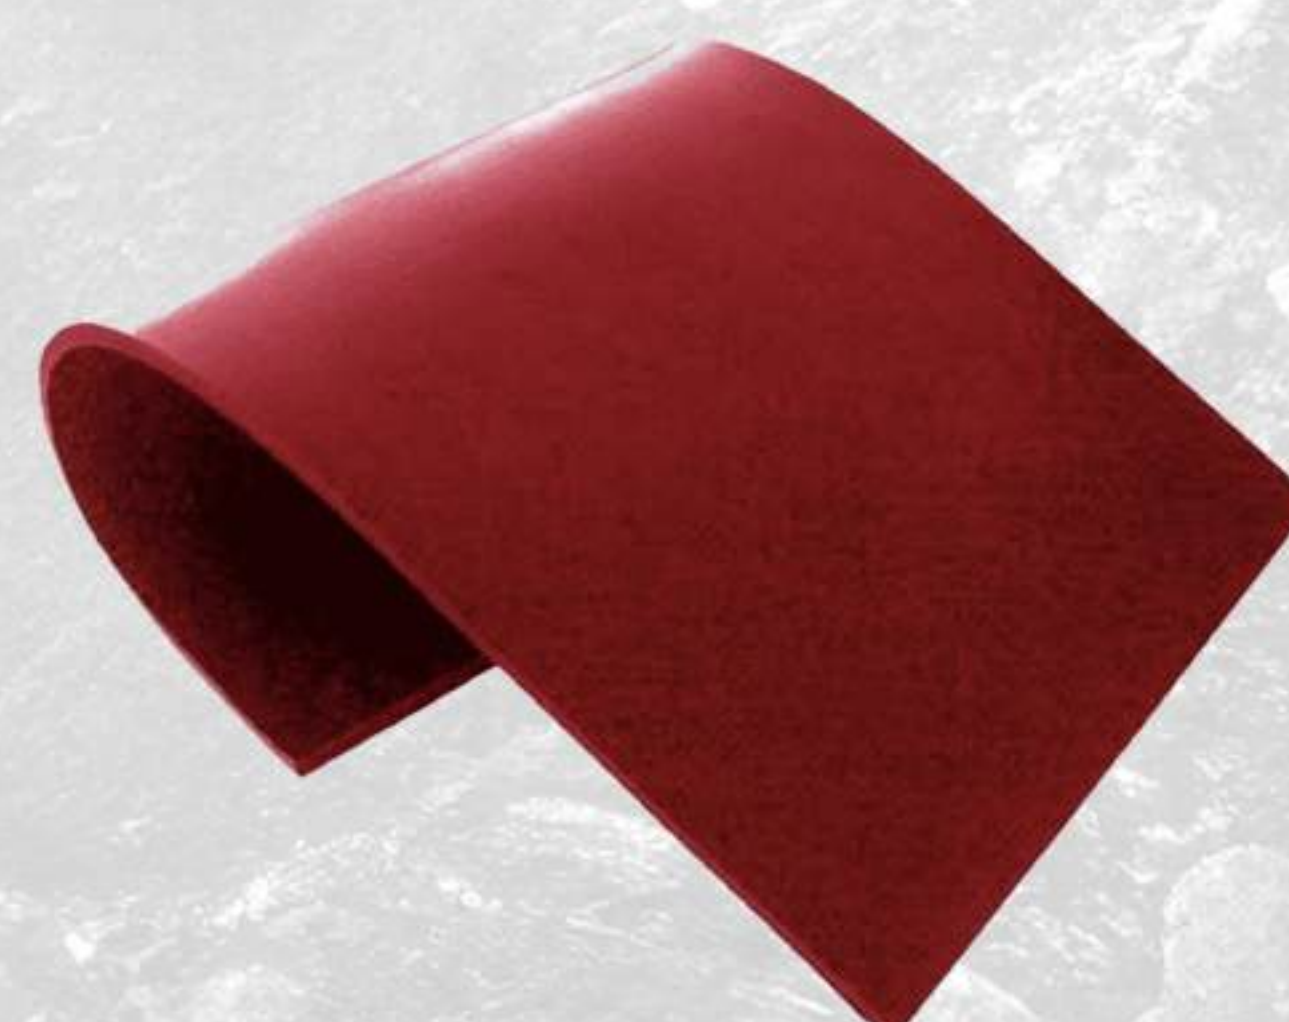

Rema Tip Top Afrique is a globally recognized supplier of high quality solutions for conveyor belt systems, wear protection, and industrial maintenance within the mining sector. The company is known for its durable rubber products, advanced bonding systems, and reliable repair technologies designed to operate in demanding mining environments.

REMA TIP TOP Afrique combines German engineering with global expertise to deliver safe, efficient, and long lasting operational solutions that support productivity, safety, and asset reliability across mining operations in Africa.

Products and Services Include:

- **Conveyor Belt Systems:** From installation to repair and maintenance, we provide durable conveyor belts and accessories.
- **Rubber and Polyurethane Products:** Offering a wide range of components for wear protection and sealing.
- **Splicing and Repair Materials:** High-performance tools, adhesives, and fabrics for quick and efficient repairs.
- **Industrial Equipment and Accessories:** A full selection of equipment to keep your operations running smoothly.
- **Training and Technical Support:** Expert training and on-site support to ensure optimal use of our products.

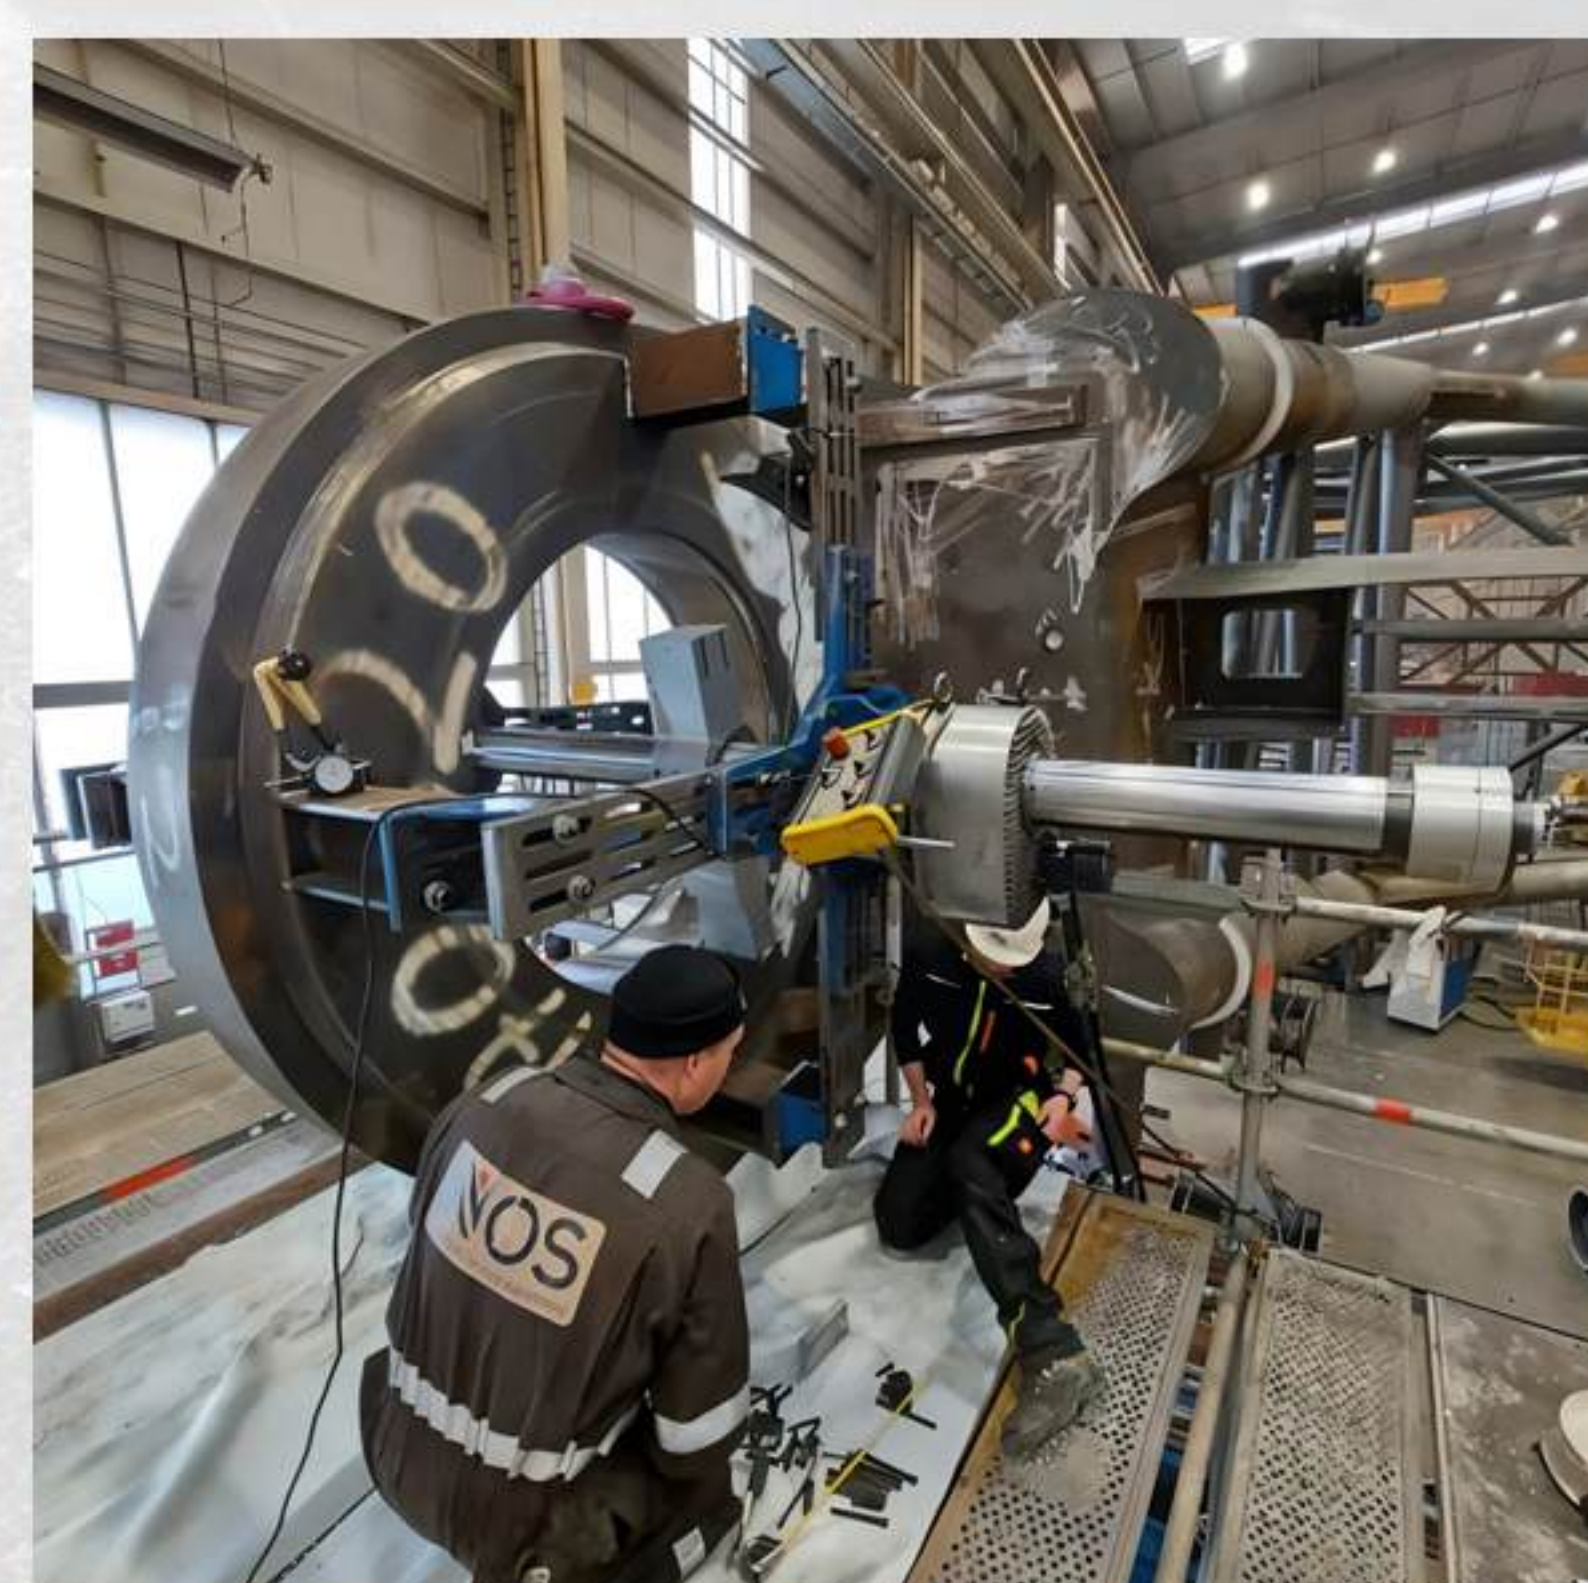

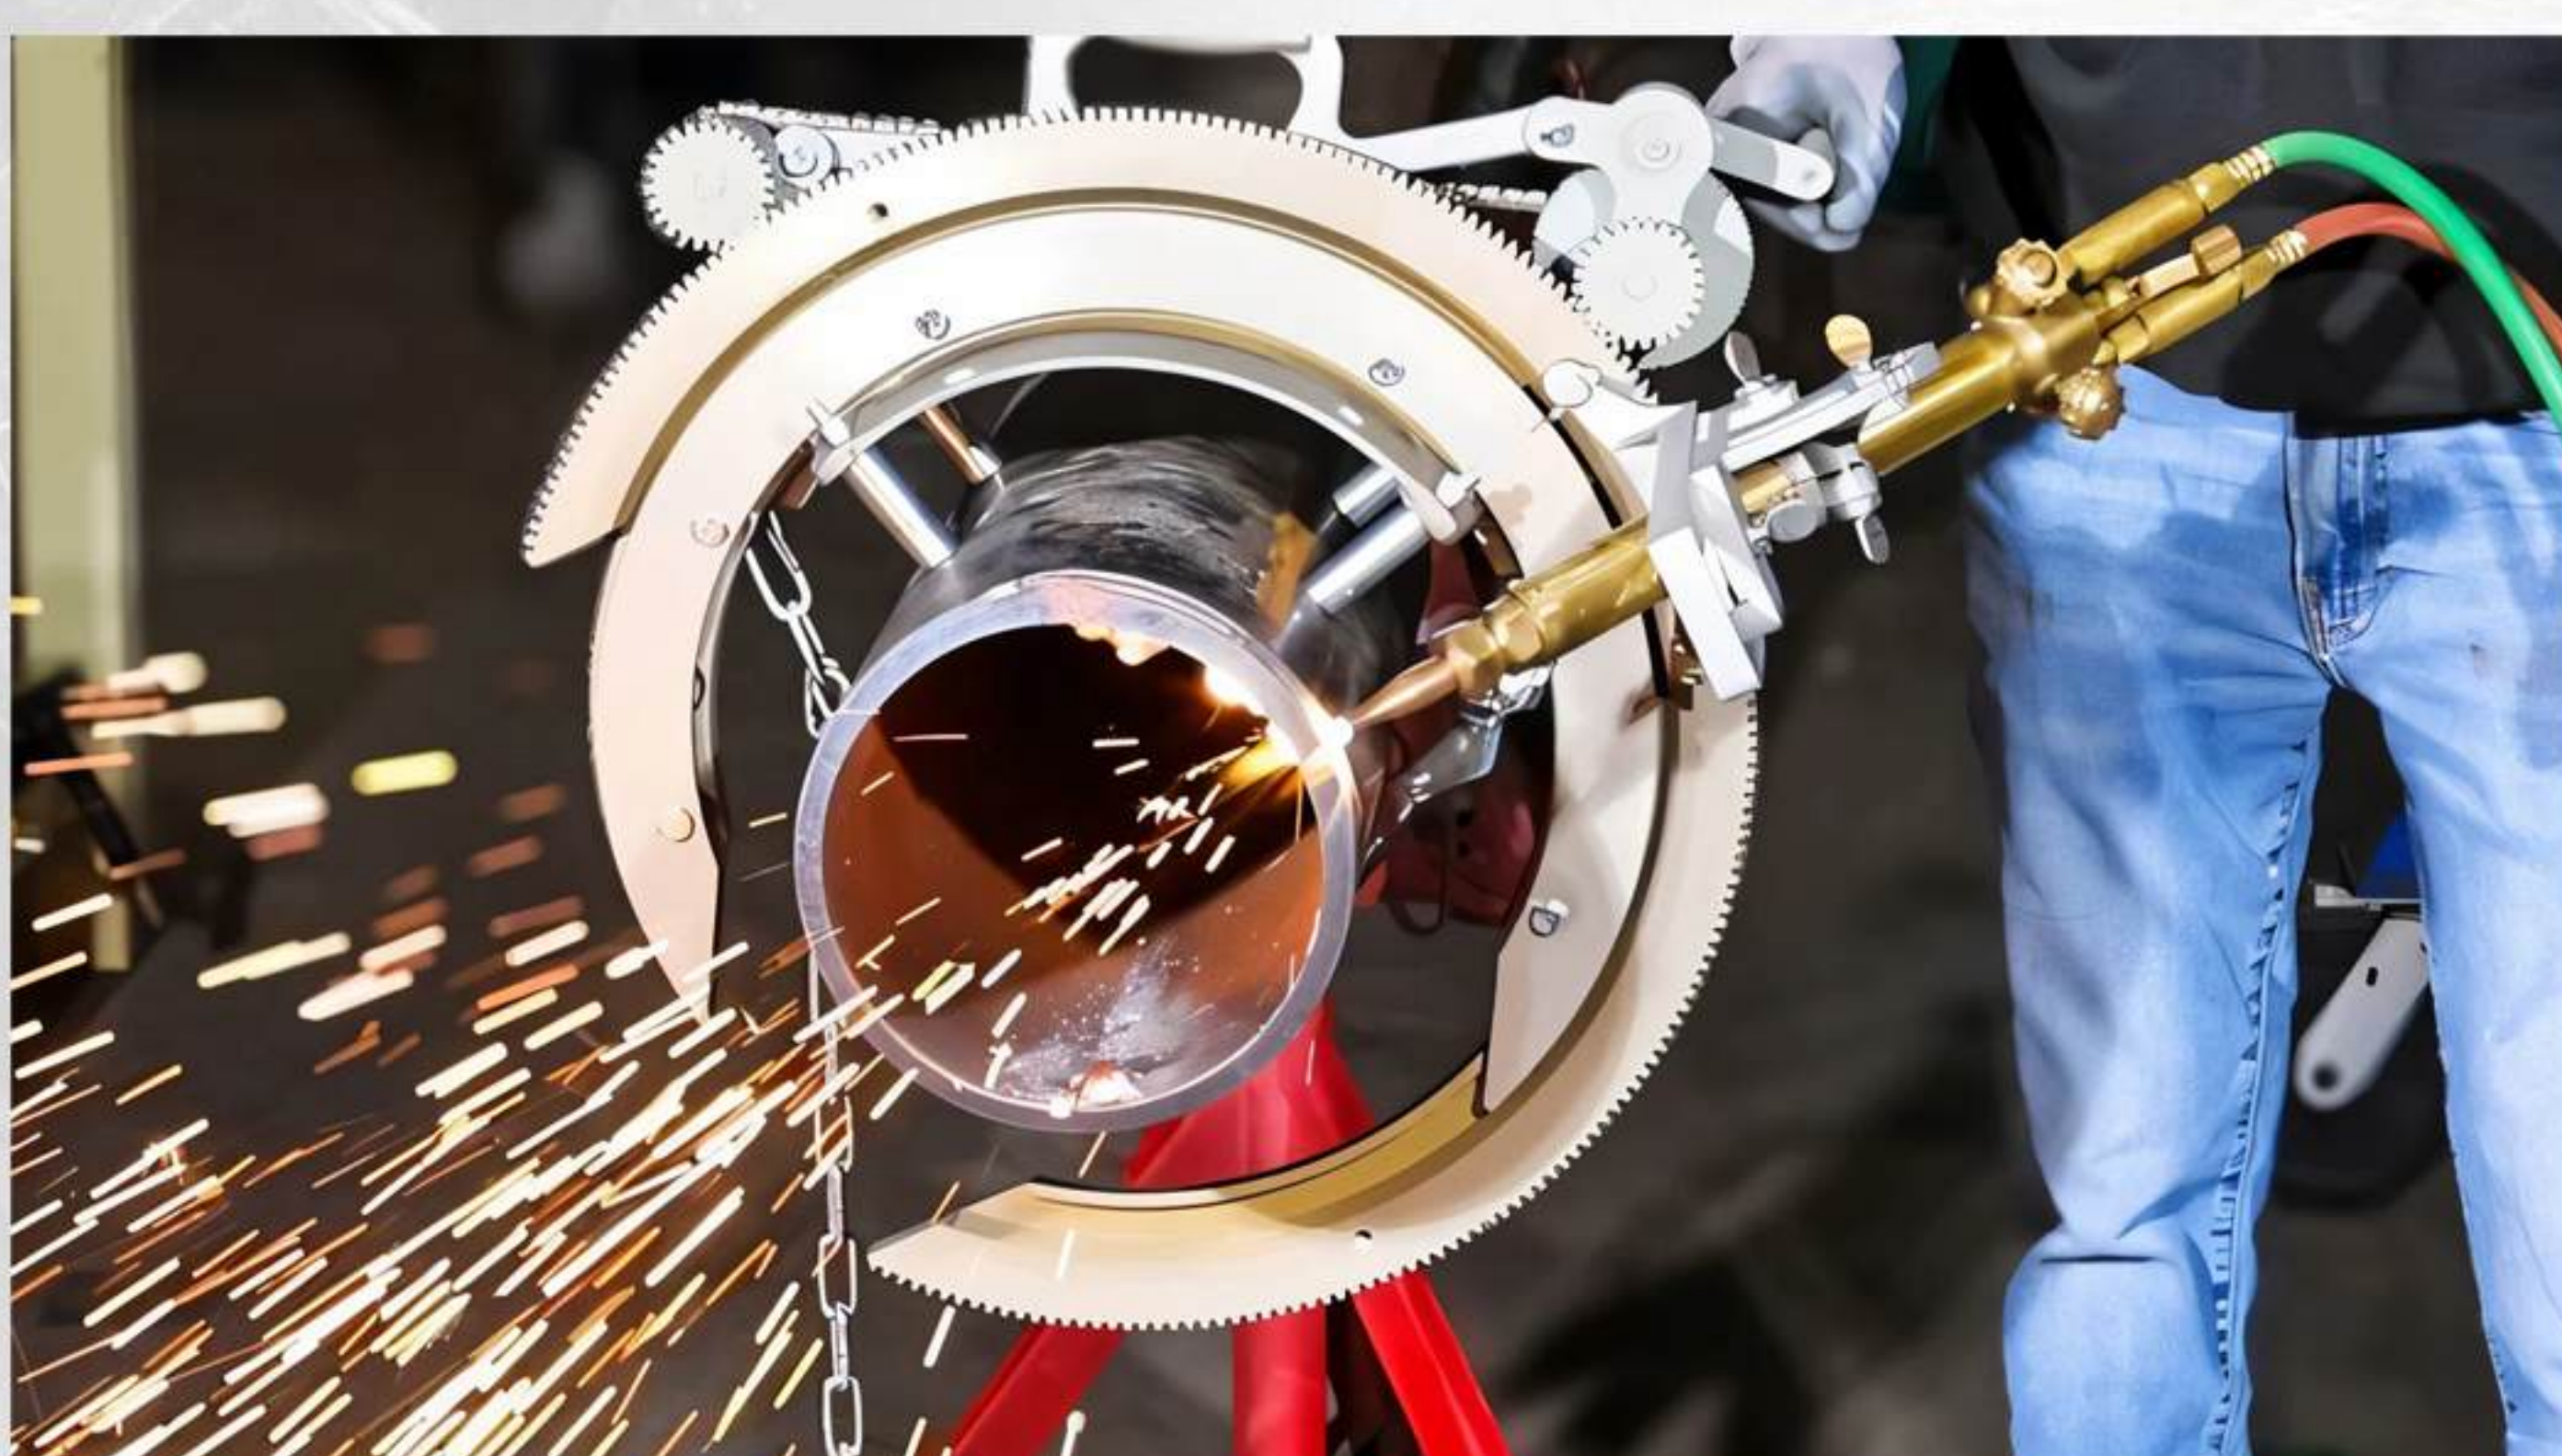

2. SFE Group

SFE Group is a global leader in fabrication, welding and machining equipment. The company was formed in 2019. Today, SFE Group consists of 12 strong brands with more than 200 years of combined engineering experience.

Reed Engineering works closely with SFE Group in Tanzania, providing sales support, technical assistance and infrastructure solutions for industrial clients.

Products and Services:

- **Pipe Fabrication Equipment:** Precision tools for cutting, aligning, welding and preparation.
- **Welding Systems:** Reliable welding machines and accessories for industrial use.
- **Machining Equipment:** Advanced solutions for beveling, facing and automated pipe fabrication.
- **Tooling and Accessories:** Clamps, jacks, fittings and measuring tools that support fabrication work.
- **Rental Solutions:** Flexible rental options for welding, cutting and machining equipment.
- **Training and Support:** Expert setup, training and technical service.

AXXAIR

3. Discoverer

Discoverer® is a world leader in geological core trays and core processing solutions. Their products are trusted by major mining and exploration teams and include core trays, boxes, photography systems, cutting equipment and accessories designed for durable, efficient field use.

The company is also a pioneer in sustainability, using recycled polymers that prevent more than 2,000 tonnes of plastic waste each year, with a target of 30,000 tonnes by 2030. All Discoverer products are tested by NATA and ISO accredited labs to ensure performance in tough conditions. Reed Engineering supplies the full Discoverer range in Tanzania, with fast delivery and strong customer support.

Products and Services:

- **Core Trays and Boxes:** UV-resistant, durable options available in recycled or biodegradable materials.
- **Core Logging Accessories:** Labelling, photography, cutting and storage tools for geologists.
- **Automatic Core Saws:** Safe, high-performance saws with magnetic carriers and adjustable speed.
- **Consumables:** Long-lasting blades and durable core boats that reduce the need for frequent replacements.
- **Sustainability:** Eco-friendly materials and biodegradable options that lower environmental impact.

4. Pace Valves

Pace Valves is a comprehensive service provider of industrial valves and valve automation solutions for a wide range of process applications. From its base in South Africa, the company supports sectors such as mining, minerals beneficiation, chemicals, petrochemicals, water treatment and distribution, iron and steel, power generation, and pulp and paper with fit-for-purpose products and reliable service.

Reed Engineering partners with Pace Valves to deliver engineered valve packages, application support, and after-sales assistance for projects in Tanzania and the broader region. This collaboration helps ensure clients receive technically correct, cost-effective, and dependable flow control solutions.

Products and Services:

- **Industrial Valves:** Ball, butterfly, gate, globe, check, diaphragm, knife gate, needle, plastic, and plug valves for diverse media, pressures, and temperatures.
- **Pressure Control and Protection:** Pressure-reducing valves, pressure-relief valves, and strainers that stabilize process conditions and protect downstream equipment.
- **Valve Actuators:** Electric, hydraulic, and pneumatic actuators for on/off and modulating service.
- **Automation Accessories:** Filter regulators, limit switch boxes, positioners, proximity sensors, and solenoids that complete valve automation packages.
- **Engineering and Support:** Assistance with interpreting technical requirements, selecting appropriate products, and providing after-sales service and customer support.

5. Scamont Engineering

Scamont Engineering is a South African manufacturer of high-lift, high-volume pump systems, purpose-built from decades of deep-level underground mine dewatering experience. Its range covers every application from low-volume, high-head duties to high-volume, high-head clear- and dirty-water management.

Reed Engineering partners with Scamont to bring engineered dewatering systems to Tanzania's mining operations, pairing Scamont's pump technology with local technical support, spares holding, and rapid-response service to keep underground water management running without interruption

Products and Services:

- **Multistage Centrifugal Pumps:** GSB, SRB and GHP ranges engineered for high-lift, high-volume clear-water dewatering in the harshest mining environments.
- **Positive Displacement Slurry Pumps:** Triplex PD SP200 and SP600, and Duplex PD FXG pumps, built as the benchmark for high-pressure dirty-water and slurry applications.
- **Dewatering System Design:** Engineered underground mine dewatering solutions, matched to any duty from low-volume, high-head to high-volume, high-head.
- **Foundry & Manufacturing:** In-house foundry and manufacturing capability, giving full control over casting quality and component lead times.
- **Technical Support:** Installation support, maintenance planning and on-site service to minimize downtime and extend pump life.

6. Bajaj INDEF – Cranes and Hoists

Bajaj Cranes is a leading manufacturer of high-quality cranes and lifting solutions, designed to meet the demands of various industries including construction, logistics, and infrastructure. Known for their reliability, innovation, and performance, Bajaj Cranes provides robust equipment that ensures safe and efficient operations in even the most challenging environments.

Our Products and Services

- **EOT Cranes (Electric Overhead Travelling Cranes):** High-performance cranes for heavy lifting in industrial environments.
- **Jib Cranes:** Versatile and compact cranes ideal for precision lifting and handling in tight spaces.
- **Mobile Cranes:** Efficient and flexible cranes for construction sites and on-the-go operations.
- **Custom Crane Solutions:** Tailored crane designs and configurations to meet the specific needs of your operations.
- **Installation and Maintenance Services:** Comprehensive services to ensure the smooth installation and long-term maintenance of your crane systems.
- **Spare Parts and Upgrades:** Genuine spare parts and system upgrades to keep your cranes running at peak performance.

Facilities & Infrastructure

The company operates two fully equipped engineering workshops:

A main workshop located in Nyamalembo, Geita

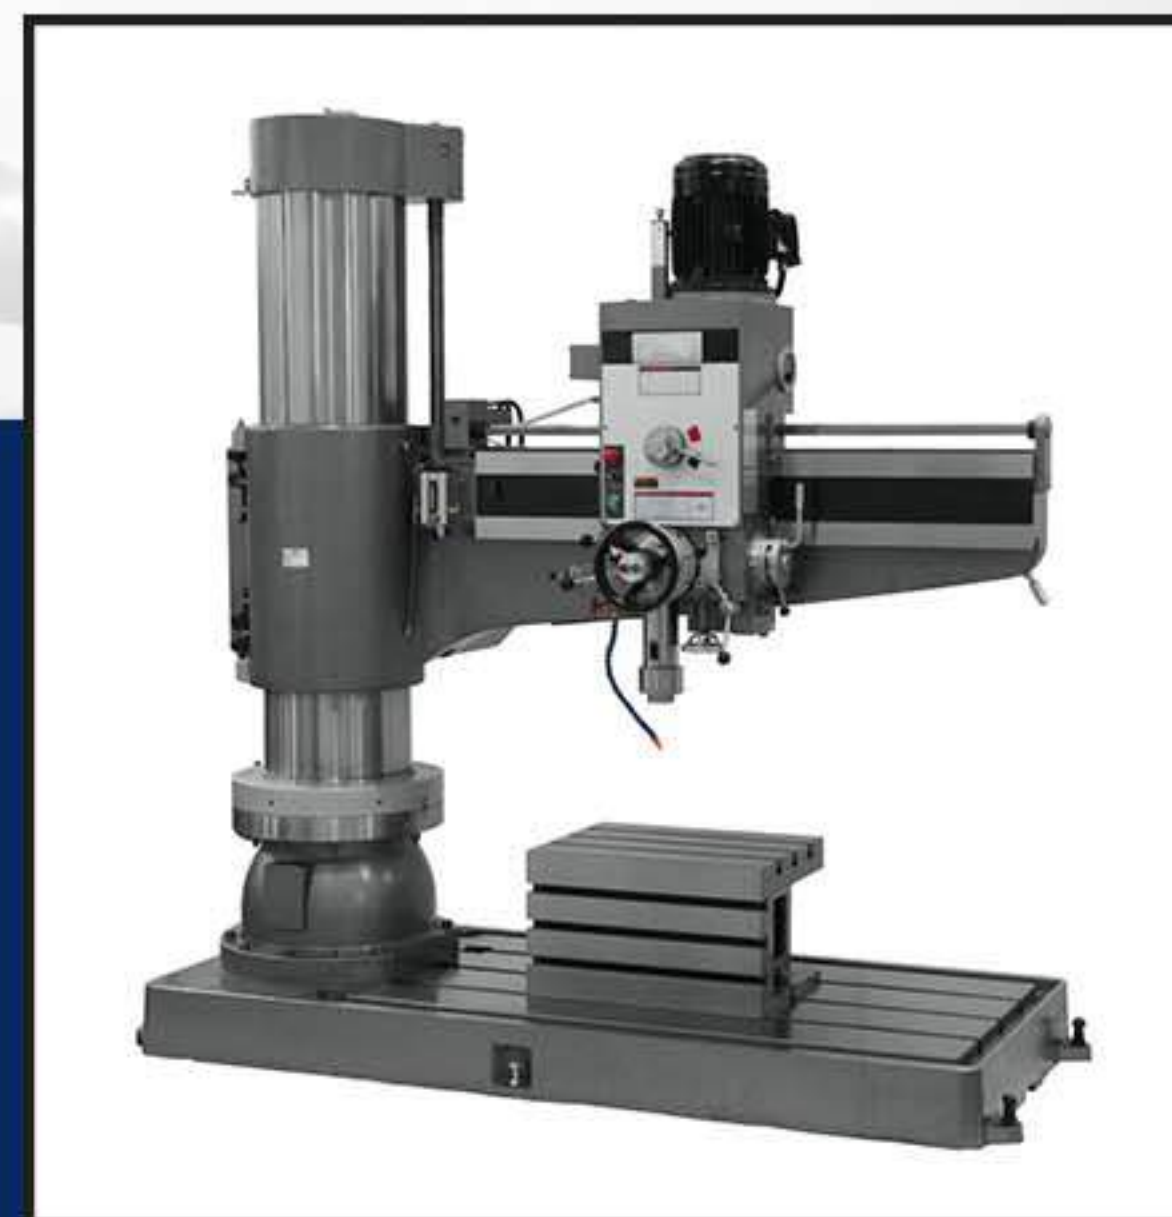

A secondary facility situated outside the AngloGold Ashanti Geita Gold Mine gate

Lathe machines

Milling & boring mills

Radial arm drills

Power band saws

Laser cutting tools

Pneumatic equipment

Screw compressors

Bench grinders & pedestal drills

Mobile line boring and **welding** units are also deployed to support emergency response, shutdowns, and remote-site repairs.

Our Workforce Strength

We maintain a robust, experienced team to execute complex projects across multiple mining sites:

15

Coded Welders

67

Boiler makers

42

Specialist
Mechanics

65

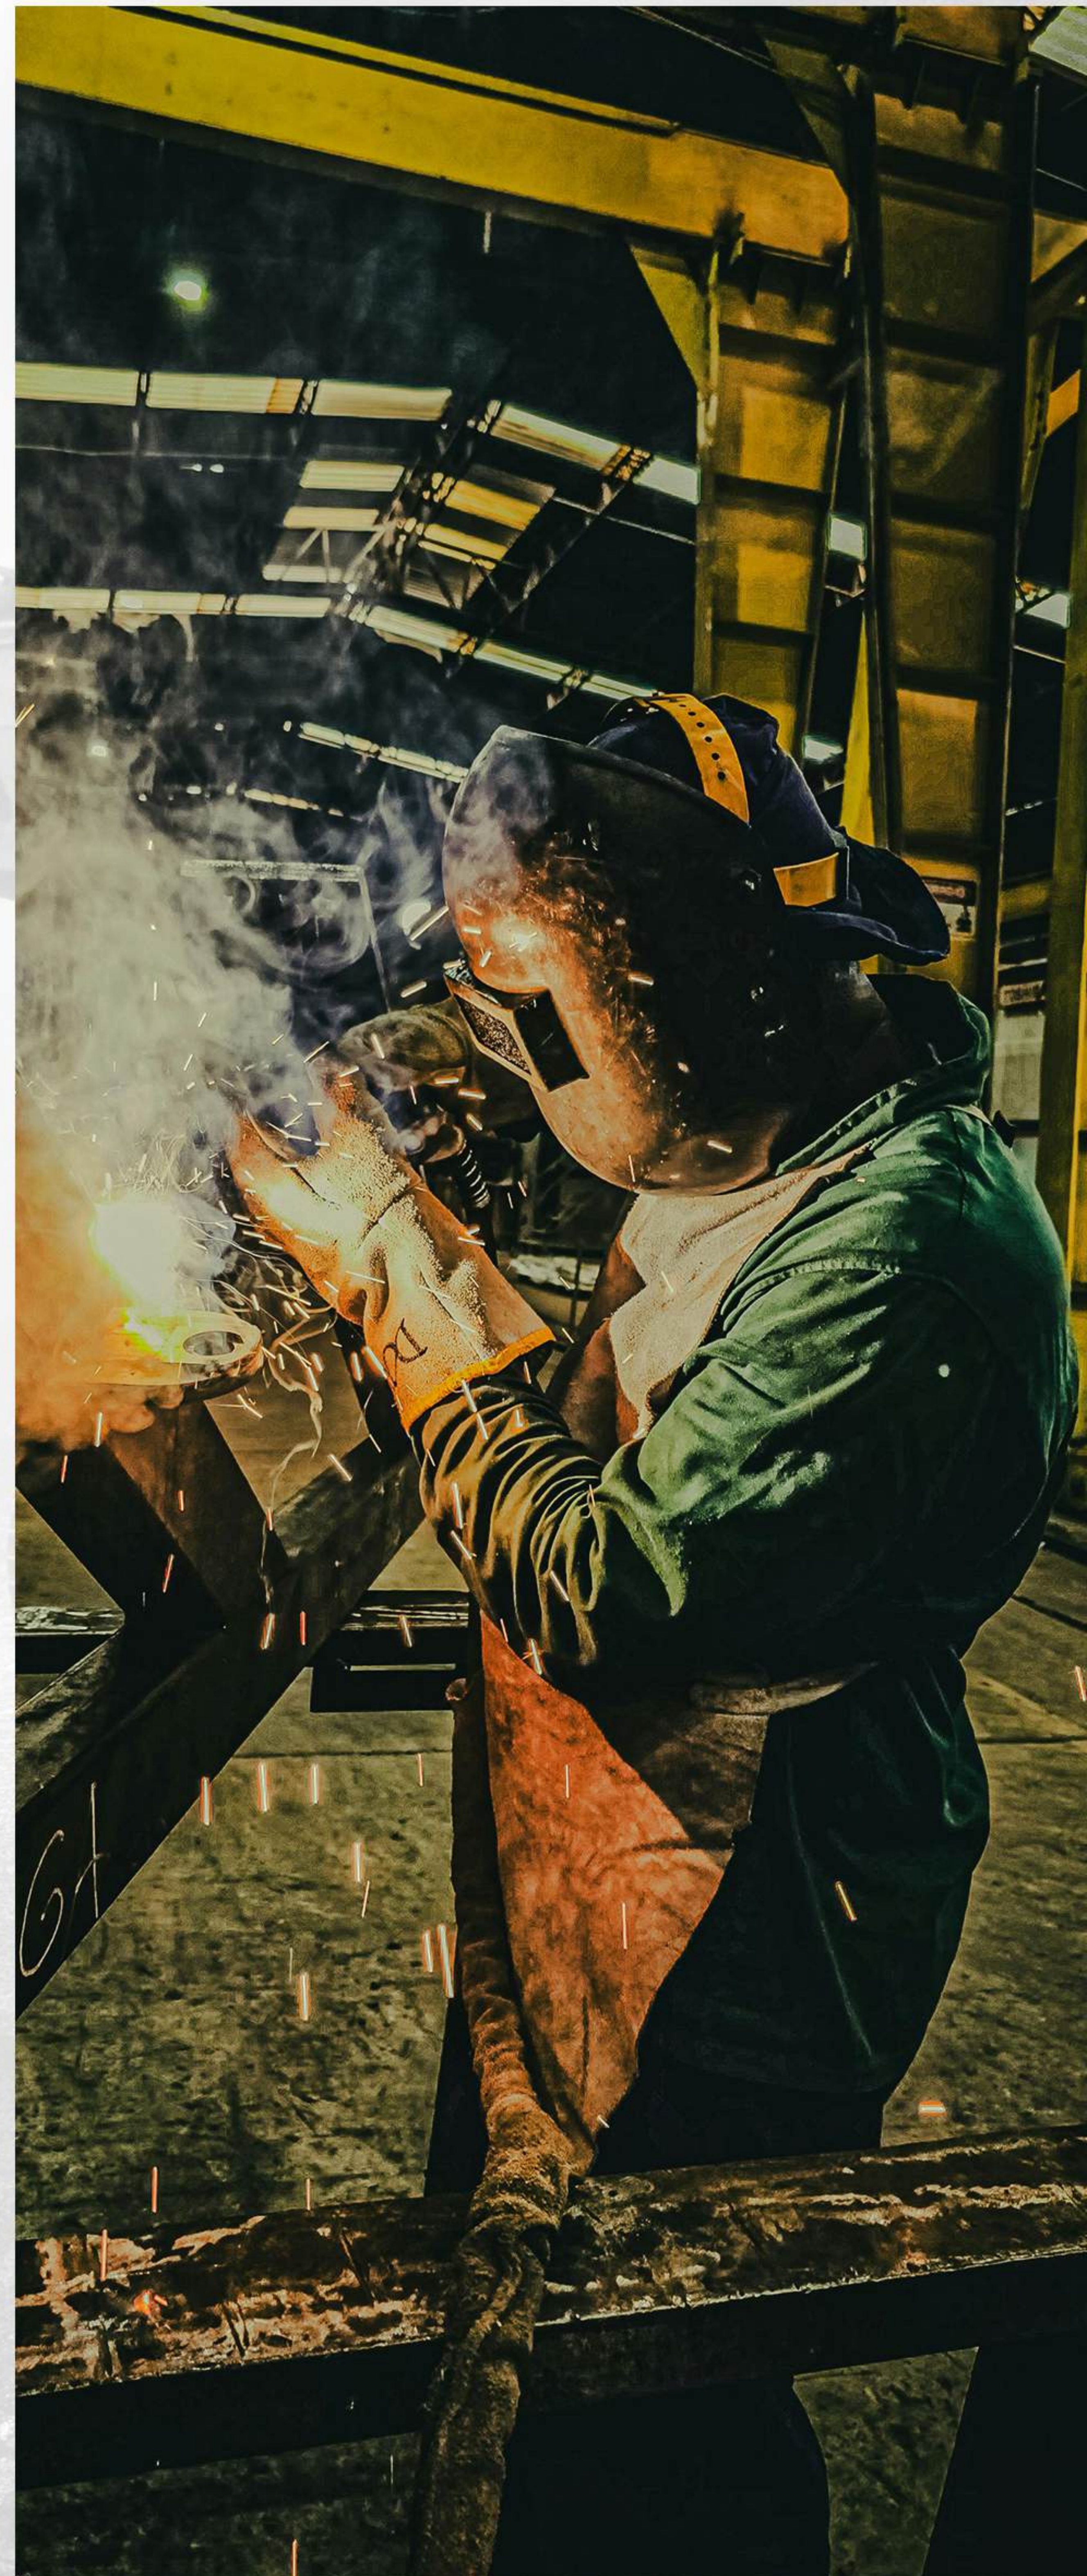

Fitter
Mechanics

45

Artisans

10

05

Drivers

13

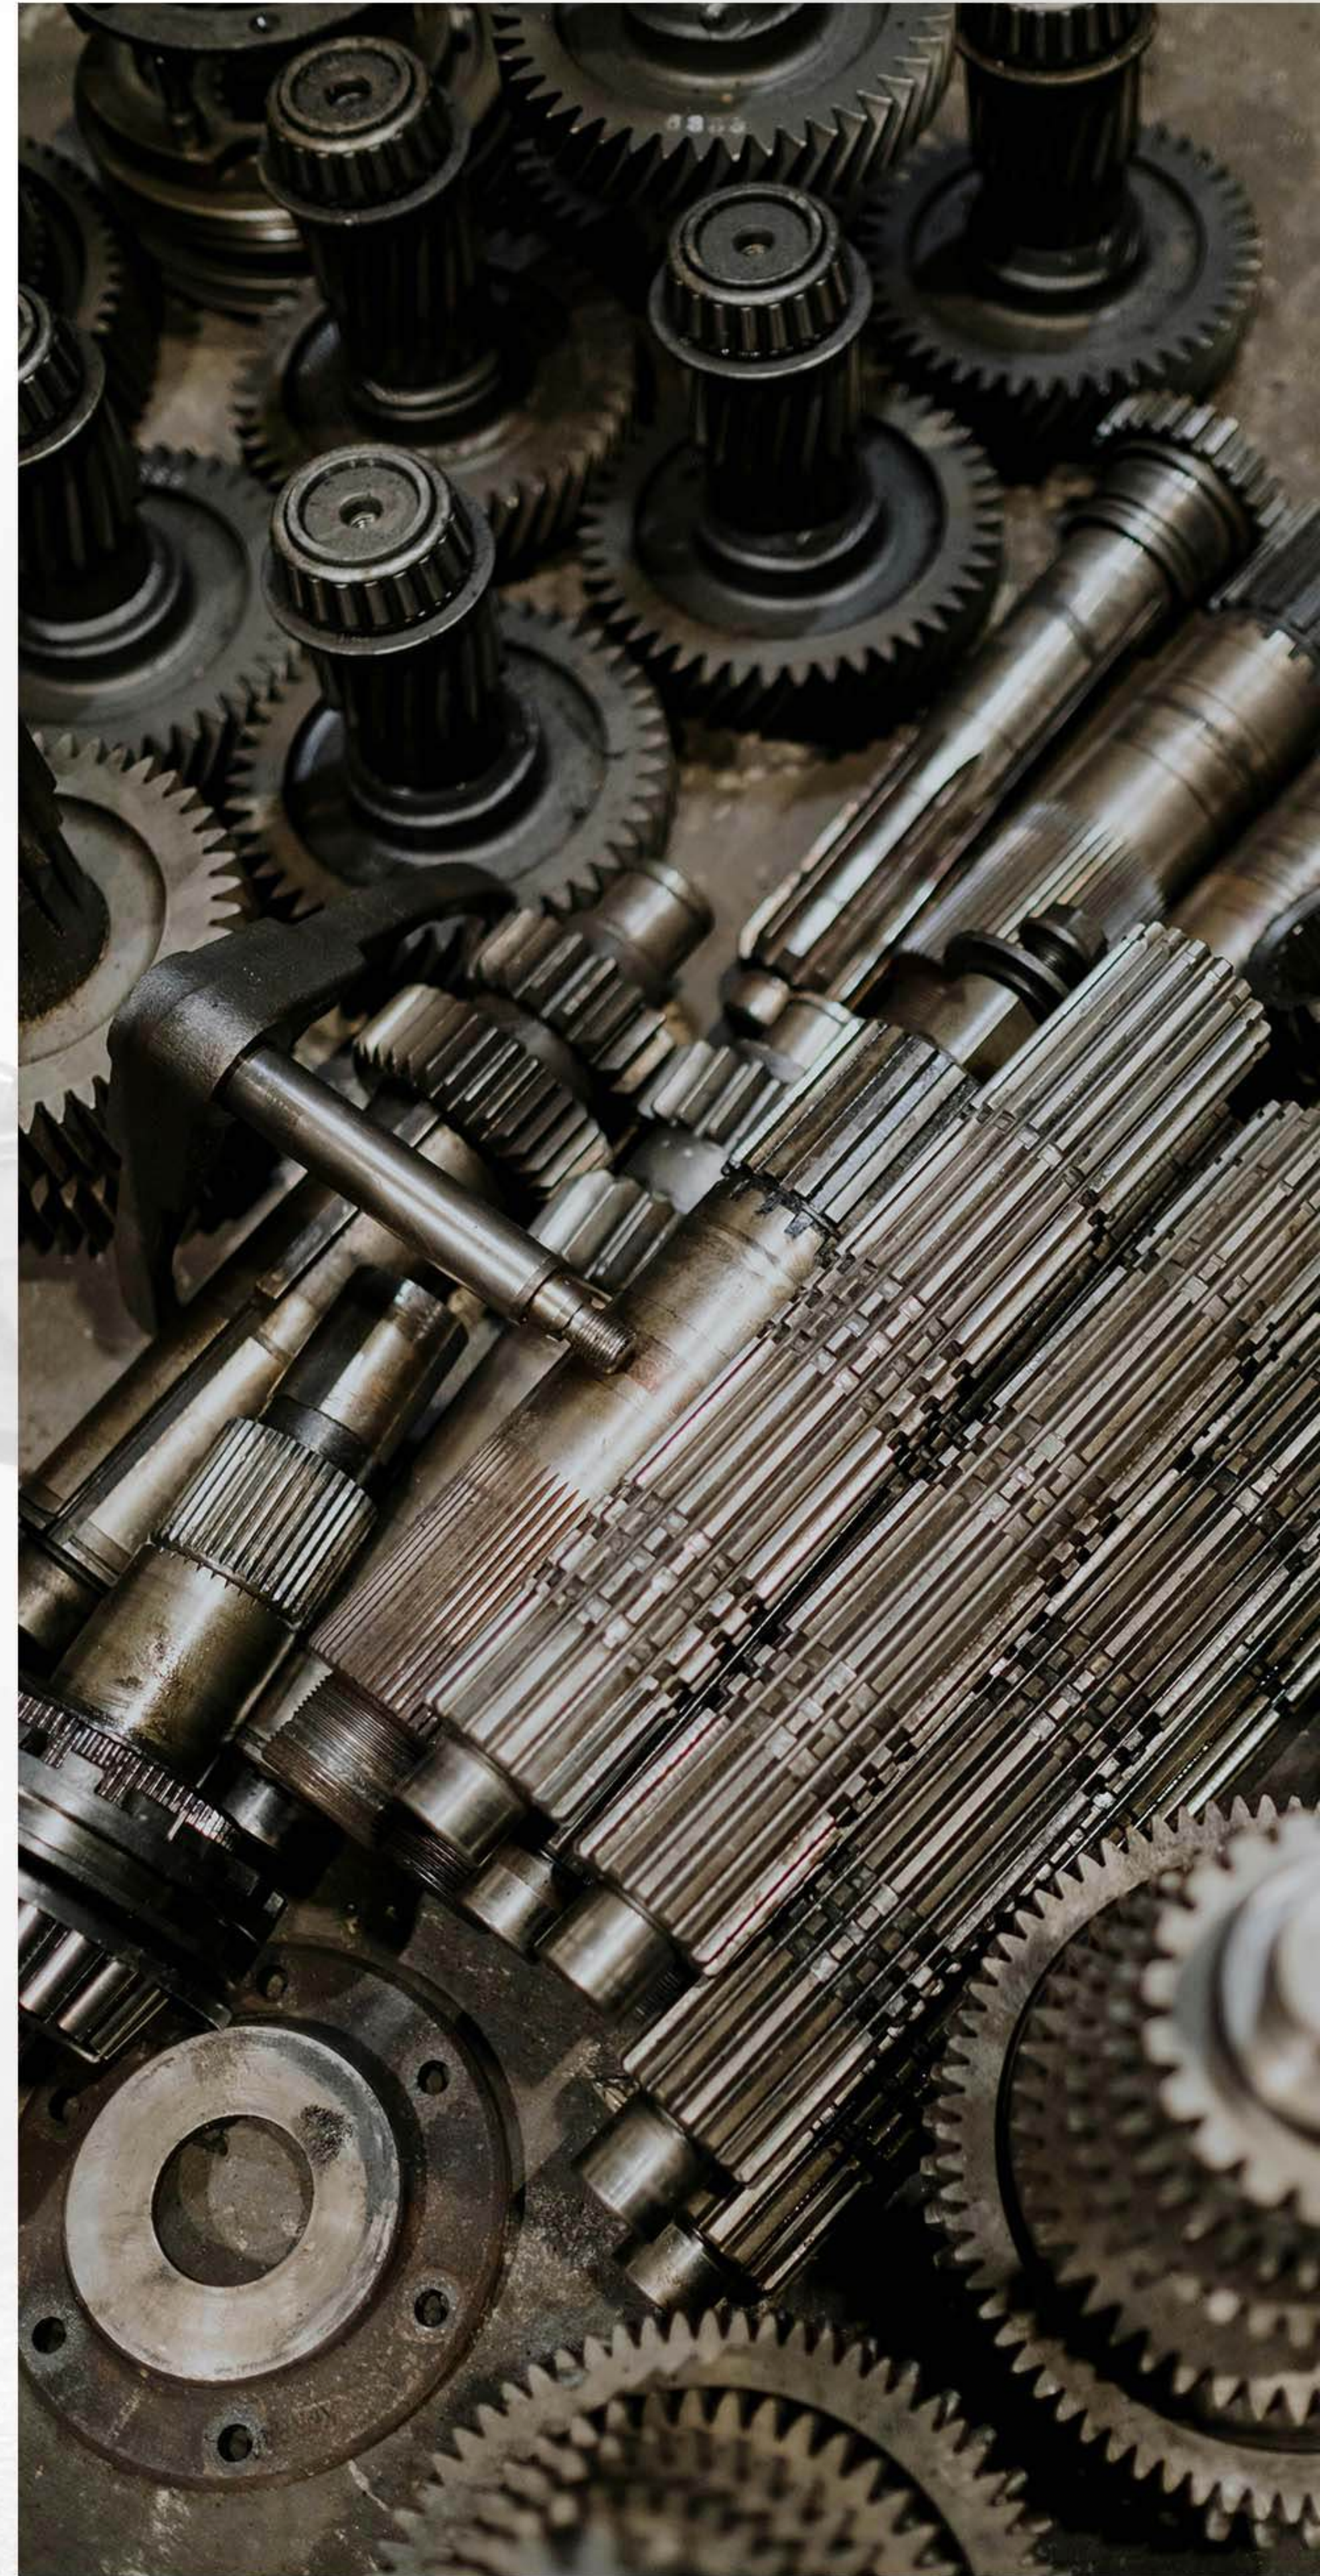

Supervisors
(Workshop, Plant,
Underground)

04

Admin &
Procurement Staff

05

Safety Officers /
HSE Reps

CERTIFIED FIRST AIDERS DEPLOYED ACROSS ALL SITES

This team ensures technical reliability, fast execution, and safe operations across every project.

Warehousing & Storage

IN GEITA

LOCATION & RESOURCES

The Geita facility offers substantial storage capacity, making it suitable for stock holding and regional distribution.

Its strategic location enables same-day or within 24-hour delivery to key mining operations, supporting clients across Tanzania.

Our Machine Shop

Our machine shop – interior setup

Main workshop

Engineering Facilities & Equipment

A fully equipped engineering facility featuring lathes, boring mills, and milling machines. The facility supports a wide range of mining operations, serving leading clients such as Barrick, AGA, Shanta Gold, and others.

On-Site & Field Services
Mobile line boring & welding equipment are available for on-site service work, ensuring efficient maintenance and repair operations directly at mining locations.

Capabilities & Equipment are
Lathe machines, Radial arm drills,, Milling machines, Laser cutting equipment, Power band saws, Bench grinders, Pedestal drills, Screw compressors, Pneumatic tools including grinders, wrenches, and more.

Facility Presence Operations
are supported by two engineering and welding facilities strategically located in Geita, including a site positioned near the main entrance of AngloGold Ashanti's Geita Gold Mine.

Workshop

Supply Chain & Logistics Support

Access comprehensive supply chain and logistics solutions through a strong global network of trusted suppliers and strategic partners.

End-to-end logistics, freight forwarding, and clearing services are seamlessly facilitated through trusted supply chain partners across multiple regions, delivering efficient in-country and cross-border solutions.

Reliable transport services are offered using both low-bed & standard trucks, designed to meet the demands of heavy industries & mining operations. From machinery and bulk goods to specialized equipment, every delivery is handled with safety, precision, and efficiency across local and international routes.

Forwarding solutions are also available from Mombasa, supporting clients across East and Central Africa with streamlined logistics operations.

With proven experience in handling mining logistics and long-distance haulage, we guarantee:

Secure movement of heavy-duty loads

Timely cross-border deliveries

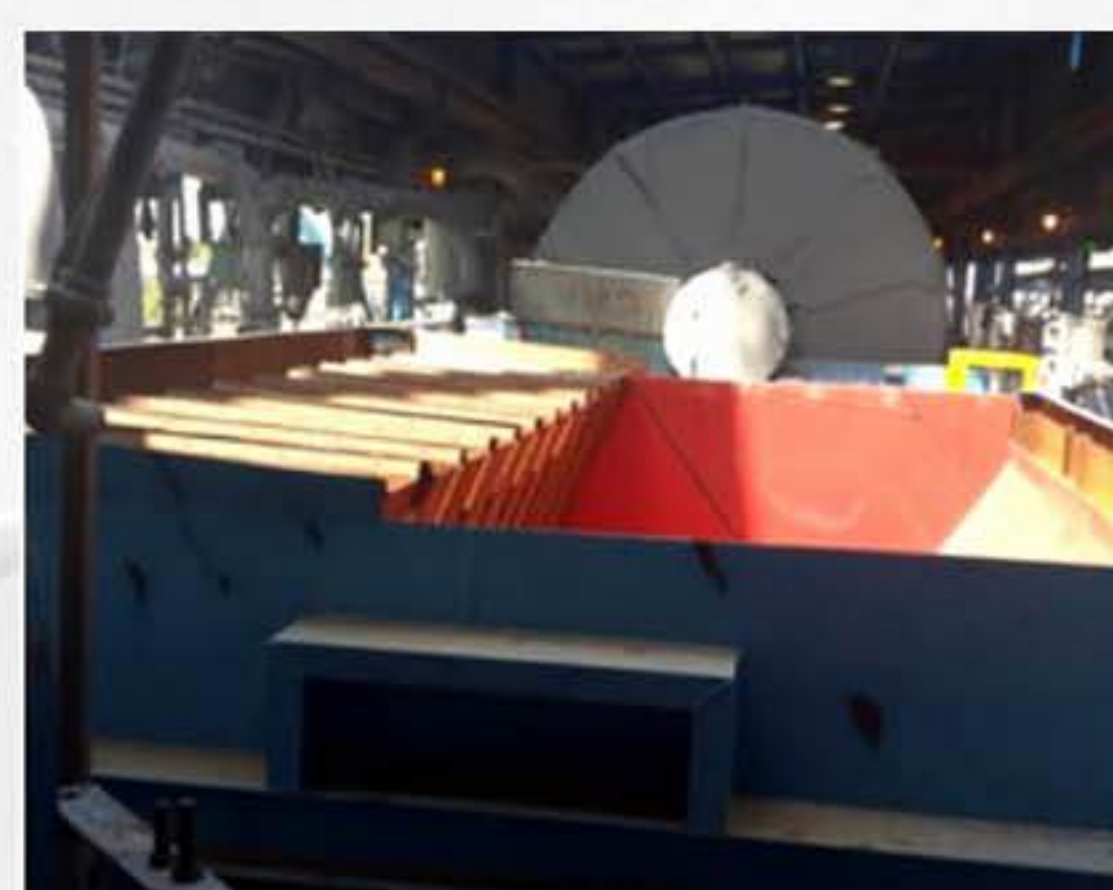

Flexible solutions for both local & regional clients

Our transport services are built on strength, reliability, and trust – keeping your operations moving, wherever the road leads.
